

LAMINATED POLYETHYLENE PLANKS

They are polyethylene planks laminated in one or several layers in order to reach different thicknesses that adjust perfectly to the product or the area to be protected, in densities of 1.2 pcf to 6 pcf.

They can be used in various applications where cushioning is needed in protection of any type of articles or goods and even for flotation, construction or cushioning of surfaces.

FEATURES:

- Hidrophobic
- 100% recyclable
- Compression resistant
- Antistatic
